TWEETER

One of the most popular tweeters, the **HS 25 DUST**, has a successor that simply has the suffix **EVO**. But it's not just the additional three letters that make the difference, the loudspeaker development department would have made it too easy for itself.

DUST has always stood for maximum sound standards and detailed sound. The newly developed silk dome, lightened by a few milligrams, helps the **HS25 DUST EVO** to follow the music playback even more precisely, faster and more powerfully. As a result, the **EVO** produces excellent precision in front staging and delights the heart of every sound enthusiast with its warm tones. The basic structure is the **HS25 DUST INSTALL EVO**, followed by the **EM** version (stands for **EASY MOUNTING** or simple assembly) and the **HS25 DUST EVO** with aluminum front ring and protective grille. Of course, all 3 versions have a defined coupling volume. Enjoy!

Fs:

815 Hz

Impedance:

4 Ohm

Available:

HS25 DUST EVO

HS25 DUST EM EVO

HS25 DUST INSTALL EVO

Frequenz Response:

2000-25000 Hz
