

DSP-AMPLIFIER

ANALOG meets DIGITAL... A new 8-channel DSP technology including APP control is the heart of the brand new **R-110.4 DSP-BT**.

Straightforward and thanks to the simplest of settings, this APP (Bluetooth)-controlled amplifier allows problem-free individual adjustment to the music taste of every DSP freak. Like its predecessor (**R-110.4** without DSP), the **R-110.4 DSP-BT** shines with a typical warm but also powerful analogue sound. According to **CAR&HIFI**, the AMP produces a very low THD of 0.014%, extremely clean voices and a lifelike sound. The software, which is controlled via an APP (ANDROID, soon also via iOS), offers the user all options. 8x PRESETS, 6-channel input mixer, 30x parametric EQs per channel and various filter characteristics with up to 48 dB slope. Not revolutionary but with know-how to the point. Developed in Germany by the **AUDIO SYSTEM** engineers, what else could you ask for...

BTL or SE Detection with automatic switch on
Power:

4x 110 WRMS @ 4 Ohm
 2x 200 WRMS @ 2 Ohm
 2x 400 WRMS @ 4 Ohm

Size:

325x50x185 mm

DSP-Equipment :

8x Presets

8-channel DSP, 4x of it are routed to the RCA outputs

30x parametric EQs per Channel

APP-Control

1x AUX Input

R-110.4 DSP-BT

Audio System R-110.4 DSP-BT

Absolute Spitzenklasse 1,3

CAR & HiFi 3/22

Preis/Leistung: sehr gut

„Analoge Vierkanälerin mit 8-Kanal DSP.“
