

DSP-AMPLIFIER

The **AUDIO SYSTEM** DSP power amplifier family has been expanded with the brand new and very affordable 5-channel entry-level model **CO-40.5 DSP-BT**.

RODUCT

Small & fine, packed with ideal DSP technology. As with the "big" DSP power amplifier brothers, the abbreviation DSP-BT stands for the fact that this DSP amplifier can be controlled via the same APP (ANDROID, soon also via iOS). **7x processed channels** are available - five for internal use, two for further use via cinch output. The software offers the user many options:

- 8x PRESETS
- Runtime
- 7x parametric EQs per channel
- 12 dB slope at HP/LP/BP

The two AUX inputs are also important. One of them includes an additional signal detection, which enormously expands the field of application of this DSP power amplifier. The **CARAVAN area** should be listed here, for example. Here the **CO-40.5 DSP-BT** is used to integrate a television into the hi-fi system.

BTL or SE recognition with automatic switch-on Power: 5x 40 WRMS @ 4 Ohm 5x 60 WRMS @ 2 Ohm Size: 123x45x80 mm DSP-Equipment : 8x Presets 7-Kanal DSP 2x RCA-OUT (over DSP)

7x parametric EQs per channel APP control 2x AUX Input Price: 250,-€
