LOUDSPEAKER

The M speaker series is growing with the **M 200 EVO2** and the **MS 200 EVO**.

As the article name already suggests, this is a 200mm speaker system with the associated 20cm low-midrange driver as a single chassis. The 200 entry-level system, which is extremely affordable, is not stingy when it comes to dynamics, punch, sound and efficiency. Performance with HIGHLY EFFICIENT sound will inspire many customers with OEM or retrofit radios, because the **M200 EVO2** can be operated on them without any problems. As a result, there will be MFIT 200mm loudspeaker systems as PERFECT-FIT systems in the near future. Let yourself be surprised!

The latest M-Set is delivered with the revised **HS 24 EVO 2** tweeters, the **FWK TW** crossovers and the newly developed **MS200 EVO** low-midrange driver. With an efficiency of 90 dB and a Qts of 0.95, it is predestined to harmonize excellently with the vehicle door volume.
